SUMMARY

Accomplished software engineer with over two years of experience specializing in backend architecture and cloud infrastructure. Demonstrated expertise in delivering scalable, cloud-native solutions and automating critical business workflows from inception to completion. Skilled in leading technical initiatives and fostering collaboration among cross-functional teams to transform business requirements into robust, efficient systems. Committed to leveraging innovative technologies to drive organizational success and enhance operational efficiency.

WORK EXPERIENCE

Software Engineer, N90 Financing Corp. **Aug 2024 - Present**

- Joined as one of the first 2 engineers, building the company's internal software from the ground up to digitalize all lending operations end-to-end
- Led end-to-end digitalization of the credit underwriting workflow — integrating AI-powered document extraction (Kita), rebuilding the Credit Assessment Memo pipeline inside the LOS, and engineering a native credit scoring engine with versioned policy governance and tamper-proof encrypted score snapshots
- Owned the complete GCP infrastructure (Cloud Run, Cloud SQL, Pub/Sub, Cloud Tasks) and established the CI/CD pipeline with Cloud Build
- Integrated LLM capabilities and implemented workflow automations using Zapier and n8n, reducing manual operational overhead across critical business processes
- Led backend integrations with a Lending Management System (LMS) and Xero reconciliation module
- Reduced average API response time by 30% through PostgreSQL query optimization and endpoint refactoring
- Implemented end-to-end security protocols (OAuth 2.0, JWT, bcrypt, encryption at-rest/in-transit) to protect customer PII and financial data

Technologies: Node.js, NestJS, TypeScript, React.js, Next.js, PostgreSQL, GCP (Cloud Run, Cloud SQL, Pub/Sub, Cloud Tasks, Cloud Build), OAuth 2.0, JWT, Containerization

Software Engineer, Founders Launchpad **May 2024 - Present**

- Accelerated from intern to full-time engineer within 3 months after demonstrating strong technical ownership and product delivery
- Spearheaded the development of an internal startup application platform that streamlined the application and screening process by 70%
- Architected and implemented workflow automations using Zapier and n8n, reducing manual operations across internal business processes
- Extended technical expertise to portfolio companies including Onelot and Skyway Air, supporting their web development and product delivery needs
- Participated in weekly strategy meetings with the CEO, aligning technical initiatives with business objectives

Technologies: Node.js, TypeScript, React.js, Next.js, PostgreSQL, Supabase, Vercel, OAuth 2.0, JWT, Zapier, n8n

Software Engineer, AgadPay **Aug 2025 - Present**

- Engaged as an outsourced engineer delivering full-stack features and technical support for an early wage access fintech platform
- Implemented a trust device security feature including device fingerprinting and capture of device metadata to enhance authentication and fraud prevention
- Contributed to the development of payment integrations using Xendit to enable seamless disbursement workflows
- Maintained and improved backend APIs and frontend components, ensuring code quality and reliability across the platform

Technologies: Node.js, TypeScript, React.js, PostgreSQL, AWS, Xendit

Software Developer, Itemcount (via Cauld & Clark ITS) **Jan 2025 - Aug 2024**

- Contributed to full-stack development of an AI-powered franchise management platform providing real-time inventory intelligence, POS integration, and growth analytics for multi-location businesses
- Developed and maintained microservice APIs delivering client feature requests that increased user engagement by 25%
- Worked within a containerized microservices architecture utilizing Elasticsearch, Redis, and Temporal
- Retained as part-time developer post-internship, continuing to support feature development and bug resolution

Technologies: Node.js, TypeScript, React.js, PostgreSQL, AWS, Xendit

Junior Software Engineer, Tagpros **Oct 2022 - Dec 2022**

- Developed and maintained features for a Learning Management System serving 20 schools and districts across the US
- Participated in agile ceremonies, implemented user stories, and collaborated with cross-functional teams
- Conducted unit and integration testing to ensure reliability and adherence to requirements

Technologies: Node.js, React.js, PostgreSQL, AWS, Serverless Architecture, Material UI

EDUCATION

Bachelor of Science in Information Technology - Bulacan State University Aug 2020 - Jul 2024

- Magna Cum Laude
- GWA: 1.262
- Consistent Dean's Lister
- Best in Capstone Project: "Smart Plastic Bottle Bin: A Reverse Vending Machine"
- Outstanding Student Awardee
- Best in Programming
- Best in Specialization Award: Web and Mobile Application Development

KEY SKILLS

- Backend & APIs: Node.js, NestJS, TypeScript, REST, GraphQL, API Design, Backend Architecture, Microservices, Serverless, Containerization
- Frontend: React.js, Next.js, Tailwind CSS, Material UI, Component Libraries
- Data & Storage: PostgreSQL, MongoDB, Redis, Elasticsearch, Real-time Data Processing
- Cloud & Infrastructure: AWS, GCP (Cloud Run, Cloud SQL, Pub/Sub, Cloud Tasks, Cloud Build), Docker, CI/CD, Infrastructure as Code
- AI & Automation: LLM Integration, Prompt Engineering, AI-powered Automation, n8n, Zapier
- Security & Compliance: OAuth 2.0, JWT, Device Fingerprinting, Encryption at-rest/in-transit, PII Protection, KYC/KYB Workflows
- Observability & Monitoring: Sentry, Distributed Tracing, Log Aggregation, Error Tracking, Performance Monitoring
- Development Tools & Practices: Git, Agile/Scrum, Code Reviews, Technical Documentation, Unit & Integration Testing, Temporal
